

Quiz Corrections for Algebra 1

Due Date: When you walk in on the DAY OF THE TEST

****It is never accepted late.****

What I need to complete to earn half credit back on quizzes (on a separate sheet of paper):

1. Rewrite the question
2. Show all work
3. Box my answers
4. Provide **TWO COMPLETE SENTENCES**. One sentence needs to be why you missed it. The second sentence should be what you need to do to ensure you do not make the same mistake again.

Example:

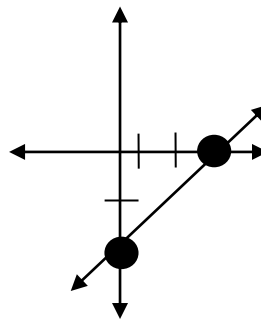

1. Question #2: Solve and graph $2x - 3y = 6$.

2. $2x - 3y = 6$

$$\frac{-3y}{-3} = \frac{-2x + 6}{-3}$$

3.

$$\boxed{y = 2/3x - 2}$$

4. When working this problem, I forgot to distribute the negative sign. When working this problem, I cannot rush through my work and make sure to distribute that negative.
