Original Grade: _____

Corrections Grade: _____

Name _____ Due Date _____ Period _____

<u>Identify the error:</u> 1. Rewrite the problem. 2. Explain in complete sentences what it was about the problem caused you difficulties. <i>"I don't know"</i> is not a legitimate answer.	<u>Demonstrate Understanding:</u> 1. Show the solution. Show all steps and all work. 2. Show how you checked your solution.	<u>Test Understanding:</u> 1. Write a similar problem (with the help of outside sources such as a textbook) 2. Explain in complete sentences what you understand now that you did not understand before.	<u>Make Corrections:</u> 1. Show the solution to the new problem. Show all steps and work. 2. Show how you checked your solution.
Example: 1. Question #2: Solve and graph $2x - 3y = 6$. 2. When working this problem, I forgot to distribute the negative sign.	1. $2x - 3y = 6$ $\frac{-3y = -2x + 6}{-3 \quad -3}$ $y = 2/3x - 2$  2. $2x - 3(2/3x - 2) = 6$ $2x - 2x + 6 = 6$ $6 = 6$ ✓	1. Solve and graph $3x - 4y = 12$. 2. When working this problem, I cannot rush through my work and make sure to distribute that negative.	1. $3x - 4y = 12$ $\frac{-4y = -3x + 12}{-4 \quad -4}$ $y = 3/4x - 3$  2. $3x - 4(3/4x - 3) = 12$ $3x - 3x + 12 = 12$ $12 = 12$ ✓
